

PTM

Reducing the risk of privileged credentials

Cloudbridge brings Privileged Task Management to your Microsoft infrastructure to reduce the risks of data breach and human error.

Allowing administrators to have privileged access to your systems and applications is a dangerous practice. Even if elevated credentials are only assigned temporarily, you have no way of knowing what changes were made by the administrator. Cloudbridge solves this problem by bringing Zero-Trust to the Microsoft ecosystem.

REDUCE THE RISK OF ELEVATED CREDENTIALS

With Cloudbridge PTM (Privileged Task Management) platform, you don't need to assign elevated credentials. Cloudbridge lets you model tasks and then delegate those tasks to staff as required. Staff will never have access to native credentials and all access will be tightly controlled through defined tasks.

JUST ENOUGH ADMINISTRATION

Putting unlimited power in the hands of people that manage all systems without any oversight is a dangerous practice. Using Cloudbridge, you can put extremely granular limits on the tasks that administrators and help desk staff are allowed to perform. With Cloudbridge, just enough administration becomes a reality.

GREATER RELIABILITY THROUGH AUTOMATION

Your IT admins and helpdesk staff perform a lot of manual administration in their workday. From adjusting a policy to editing a user, these tasks are laborious and often involve multiple systems (O365, AD, ITSM, IAM, etc) Each touch point creates a risk. With Cloudbridge automation, these routine tasks get moved into the cloud and execute automatically. You can rest assured that the task is performed reliably and without delay.

ELIMINATE THE BURDEN OF PROOF AND SIMPLIFY COMPLIANCE

In today's world of increasing compliance and government oversight, your job of proving things is becoming far more difficult and the fines of non-performance are frightening. With Cloudbridge, every user task is completely audited. The "who, what, where and when" are all automatically generated for every single task, no matter how simple or complex.

DESIGNED TO FIT YOUR BUSINESS

Cloudbridge is unique. Cloudbridge focuses on your business operations. Tasks are business-tasks that can cross multiple people and multiple systems. This results in streamlined operations that save you time and money.

MINIMIZE RISK OF STAFF DEPARTURE

The people that run your systems are critical to your business. By automating your privileged tasks you put the operational knowledge into the system. This hardens your operations, resulting in risk and cost reduction when staff leave.

SECURE POWERSHELL IN YOUR ORGANIZATION

PowerShell is an essential technology in IT operations, but unmanaged PowerShell scripts create a gaping hole in your security. Cloudbridge solves this problem by providing a centralized portal for managing your scripts. Credentials are protected in a vault, script changes and executions are audited, integrated code-signing makes it simple to protect scripts. Role based access determines who can access your scripts and what they can do with them and then data that is produced.

ABOUT CLOUDBRIDGE

Cloudbridge's solutions re-imagine IT management. By enabling true automation, we empower organizations to reduce their security exposure, reduce their operational costs and embrace new technologies in ways that empower their business.

CLOUDBRIDGE HELPS THINKTEL PROTECT THEIR CUSTOMERS' DATA.

"The Cloudbridge Privileged Task Management solution allows administrators to control user and group access to objects or system actions according to the role the user or group is expected to perform within the organization. This is enabled without having to grant any underlying native access which could compromise important customer data."
