

DATASHEET

Automation

HIGHLIGHTS

Cloudbridge allows automation of administrative tasks on both O365 and on-premise Active Directory. The solution helps organizations:

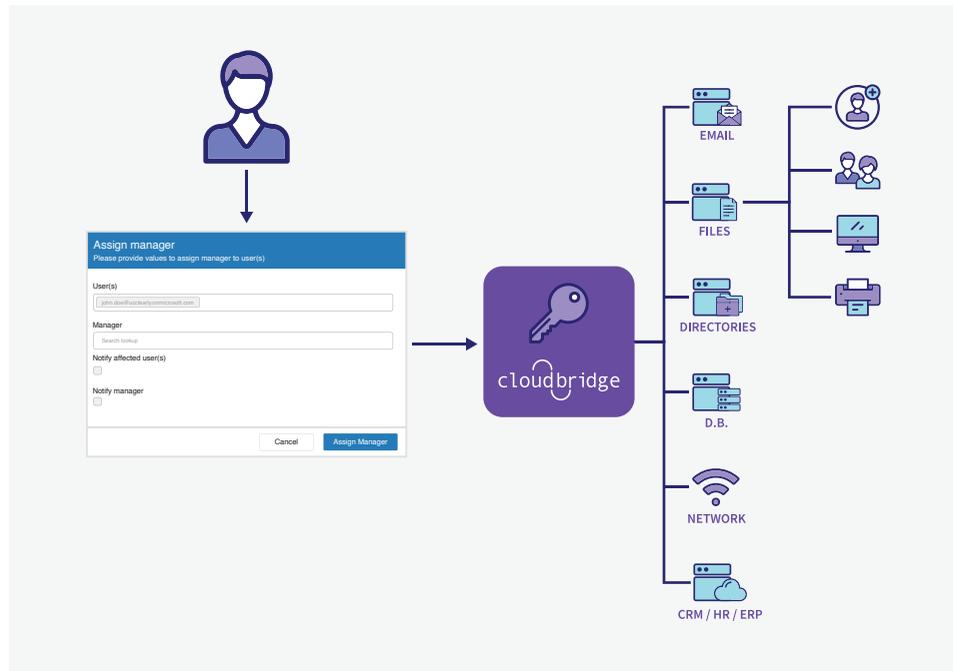

- Easily build workflow scripts for repetitive administrative tasks and provide simple UI to allow staff to start the tasks
- Build scripts with well known PowerShell
- Limit the distribution of privileged credentials
- Generate audit reports on access to sensitive systems

The complexity of managing multiple cloud and on-premise solutions is growing. Besides solving complex problems, administrators and help desk staff are also overwhelmed with relatively simple but time-consuming tasks such as de-provisioning users and assigning software licenses. For example, de-provisioning an employee according to best practices can involve many steps that are both time consuming and error prone. These steps often require several different administrators and because of backlogs, this may take a number of days to complete, or worse yet, don't get completed at all. Errors often creep into these changes because of all of the manual intervention required.

Cloudbridge is a powerful administrative console that allows for the automation of administrative tasks in systems such as Office 365, on premise Active Directory, and many others. Repetitive tasks such as de-provisioning employees according to best practices & assigning software licenses can be replaced with automated workflows. Cloudbridge wraps Powershell scripts with rich UI and processing services that transforms simple PowerShell fragments into cloud portals with little effort. Staff can then easily kickoff complex, multi-

Automation

step tasks from a graphical user interface knowing they will be performed in a reliable, repeatable and secure way. This empowers IT leaders to be more dynamic, introduce services faster, and ultimately lowers the cost of doing business.

KEY FEATURES	BENEFITS
Automate repetitive or complex administrative tasks.	Reduces the workload on administrators and help desk personnel.
Remove risks that result from human error.	Higher quality systems and better productivity for users.
Orchestrate changes across multiple different systems with a single workflow.	Save time and money.
Produce reports on privileged system access and activities.	Facilitates auditing and security. Enhances the overall security posture of the organization by limiting distribution of privileged credentials.
Provide a single console that can be used to manage privileges across systems such as Office 365 and Active Directory.	Simplifies administration for organization that have both Office 365 cloud and on-premise Active Directory .
Build REST interfaces from other systems to automatically kick off Cloudbridge workflows.	Users do not need to be trained on new system, they only need to make a change to an existing system (e.g. HR system).

ABOUT CLOUDBRIDGE

Cloudbridge’s solutions re-imagine IT management. By enabling true automation, we empower organizations to reduce their security exposure, reduce their operational costs and embrace new technologies in ways that empower their business.
